- Av. Intercomunal, Puerto la Cruz, Anzoátegui

## EDUCATION

### Kalil Gibrán School (2017-2022)

Título de Bachiller (High School Diploma)  
GPA: 18.90 (out of 20)

### UGMA, Barcelona's Campus (2022-2026)

Ingeniero en Informática (Computer Engineer) (ongoing)  
Current Semester: 7 out of 8  
Current GPA: 18.59 (out of 20)

## SKILLS

### HARD SKILLS

- Languages:** C++, JS/TS, Python, Kotlin, PHP, C#
- Web:** Node.js, Express, React, Vue, RESTful APIs
- DBMS:** MySQL, SQLite
- Mobile:** Android (Kotlin + Compose)
- DevOps:** CI/CD (GitHub Actions), Unit Tests
- Networking:** Programming with TCP Sockets
- OS:** Linux (Arch, Mint), Windows
- Other Tools:** Git, GitHub, Docker, Bash, Figma, Jira
- Proficient at **Microsoft Office Suite**

### SOFT SKILLS

- Adaptability** to new technological trends
- Critical thinking** on **problem solving**
- Leadership** in dev teams, showcasing **Project Management** skills

## LANGUAGES

- Spanish:** Native
- English:** C1 (British Council) / C2 (EF SET)
- French:** B2 (Entraînement au TCF)
- German:** B1 (DWs B1-Einstufungstest)
- Japanese:** N4 (JLPT Preparation)
- Portuguese:** A2

## PROFILE

Fullstack software developer with +3 years creating cross-platform solutions. Specialized in both systems programming, in order to build high-performance, optimized and lightweight software with C++, and web development, to deploy maintainable and scalable applications created with multiple technologies. Built solutions such as a real-time multiplayer (coop) cross-platform game with client-server architecture via TCP, proprietary CRUD web apps (React/Node.js/MySQL), and native Android apps. Experience with DevOps (CI/CD), unit testing and distributed systems.

## EXPERIENCE

Q4 2024 -  
Q2 2025

### Woolly Breakout

#### C++ Software Engineer (Project)

I built a 2D real-time local multiplayer game using C++ and the SDL2 library. I implemented a client-server architecture with TCP sockets (using Boost.Asio) to communicate through the network. As a solo developer, I was responsible for ensuring memory-safe code, engaging gameplay and build system configurations with CMake to make sure it works on both Linux and Windows.

Q1 2025 -  
Q3 2025

### Asia Bar Restaurant

#### Fullstack Developer (Freelance)

I led the development of a sales management and ticket generation system for a local restaurant, using React for the frontend and Node.js with Express for the RESTful API. The chosen DBMS was MySQL, which helped the team to create a robust database capable of managing transactions regarding the restaurant's orders, dishes and clients. This solution led to speeding up the operations on order-taking and ticket-emission, reducing manual labour and thus mitigating human error.
