Software developer coding since 2022. Specialized in both systems programming with C++, to build high-performance solutions; and web development, to deploy maintainable and scalable applications with Typescript (React, Next.js, Express).

Focused in ensuring best practices with DSA and design patterns. Tutored students in DSA and calculus

Education

Universidad Gran Mariscal de Ayacucho

Computer Engineer. GPA: 18.71 out of 20

Barcelona, Anzoátegui

Graduated. Degree conferral expected March 2027

Experience

UGMA

Freelance Frontend Engineer

Barcelona, Anzoátegui

December 2025 – July 2026

- Shipped the whole Next.js frontend of a student enrollment projection & academic scheduling web app.
- Integrated with a dockerized Golang + PostgreSQL REST API and contributed to backend design discussions.
- Architected a plethora of React hooks to manage state and api calls in a safe and scalable way using modern technologies like TanStack Query, TanStack Table, Zod, React Hook Form and Axios.
- Created responsive React components with TypeScript, Tailwind and Shadcn/ui + dnd-kit for drag-and-drop.
- Collaborated with a backend engineer through GitHub and Figma using XP and Kanban agile methodologies.

Asia Bar Restaurant

Freelance Fullstack Engineer

Barcelona, Anzoátegui

January 2025 – September 2025

- Led a three devs team in the development of a POS and ticket generation system.
- Engineered the entire Node.js + Express REST API backend and most of the React frontend.
- Established a robust MariaDB database capable of managing transactions involving orders, dishes and clients.

Projects

Woolly Breakout

C++ Software Engineer

September 2024 – May 2025

- Developed a 2D real-time local multiplayer indie game using C++20 and the SDL2 library.
- Implemented a client-server architecture with TCP sockets (using Boost.Asio) to communicate through LAN.
- Set up build system configurations with CMake so that it runs on both Linux and Windows.
- Applied OOP and functional principles to ensure memory-safe code in a multithreading environment.

Chess Clone

C++ Software Engineer

March 2024 – July 2024

- Built a performant chess clone using C++20 and the SDL2 library leveraging inheritance for pieces and moves.
- Added a custom bot made with the minimax backtracking AI algorithm based on the board's evaluation.

Skills & Interests

Technical: Languages (C++, Python, Kotlin, JS/TS), Web Fullstack (Next.js, Vite, Vue, React, Tailwind, Framer Motion, Express.js), DBs (SQL, PostgreSQL, MariaDB, MySQL, SQLite), Mobile (Android Studio), DevOps (CI/CD, Git, GitHub, Docker, Bash, Linux), Others (DSA, OOP, AI, Deep Learning, Computer Networking, Electronics Prototyping, Arduino).

Language: Native Spanish, English C1, French B2, German B1, Portuguese B1 and Japanese N5.

Interests: Fullstack Development, Software Architecture, Machine Learning, Language Learning, Calisthenics.
